Experiment-3

Student Name: Jolly Tomar **UID:23BCS80037**
Branch: BE-CSE **Section/Group: 635-B**
Semester: 6th **Date of Performance: 25.1.25**
Subject Name: Project Based Learning in Java **Subject Code: 22CSH-359**

1.Aim: Create an application to calculate interest for FDs, RDs based on certain conditions using inheritence

2.Objective: To design and implement a Java program that calculates interest for various account types (FD, RD, SB) using object-oriented principles, focusing on abstraction, method overriding, and dynamic input validation.

3.Implementation/Code:

```
abstract class Account {
double interestRate;
double amount;
abstract double calculateInterest();
}
class FDAccount extends Account {  int
noOfDays;
int ageOfACHolder;

FDAccount(double amount, int noOfDays, int ageOfACHolder) {
this.amount = amount; this.noOfDays = noOfDays;
 this.ageOfACHolder = ageOfACHolder;
}
@Override
double calculateInterest() {
if (amount < 10000000) { // Less than 1 crore if (noOfDays >= 7 && noOfDays <= 14)
interestRate = ageOfACHolder >= 60 ? 5.0 : 4.5;  else if (noOfDays >= 15 && noOfDays <= 29)
interestRate = ageOfACHolder >= 60 ? 5.25: 4.75; else if (noOfDays >= 30 && noOfDays <= 45)
interestRate = ageOfACHolder >= 60 ? 6.0 : 5.5; else if (noOfDays >= 45 && noOfDays <= 60)
interestRate = ageOfACHolder >= 60 ? 7.5 :7.0; else if (noOfDays >= 61 && noOfDays <= 184)
interestRate = ageOfACHolder >= 60 ? 8.0: 7.5;  else if (noOfDays >= 185 && noOfDays <= 365)
interestRate = ageOfACHolder >= 60 ?8.5 : 8.0;
} else { // Greater than or equal to 1 crore
if (noOfDays >= 7 && noOfDays <= 14) interestRate = 6.5; else if
(noOfDays >= 15 && noOfDays <= 29) interestRate = 6.75;  else if
(noOfDays >= 30 && noOfDays <= 45) interestRate = 6.75;  else if
(noOfDays >= 45 && noOfDays <= 60) interestRate = 8.0;  else if
```

```
(noOfDays >= 61 && noOfDays <= 184) interestRate = 8.5;  else if
(noOfDays >= 185 && noOfDays <= 365) interestRate = 10.0;
}
return amount * interestRate / 100;
}
}
class RDAccount extends Account {
int noOfMonths; double
monthlyAmount;
 int ageOfACHolder;

RDAccount(double monthlyAmount, int noOfMonths, int ageOfACHolder) {
this.monthlyAmount = monthlyAmount; this.noOfMonths = noOfMonths;
this.ageOfACHolder = ageOfACHolder;
}
@Override
double calculateInterest() { if (noOfMonths == 6) interestRate =
ageOfACHolder >= 60 ? 8.0 : 7.5; else if (noOfMonths == 9) interestRate =
ageOfACHolder >= 60 ? 8.25 : 7.75;  else if (noOfMonths == 12) interestRate =
ageOfACHolder >= 60 ? 8.5 : 8.0;  else if (noOfMonths == 15) interestRate =
ageOfACHolder >= 60 ? 8.75 : 8.25;  else if (noOfMonths == 18) interestRate =
ageOfACHolder >= 60 ? 9.0 : 8.5;  else if (noOfMonths == 21) interestRate =
ageOfACHolder >= 60 ? 9.25 : 8.75;  return monthlyAmount * noOfMonths *
interestRate / 100;
}
}
class SBAccount extends Account {
String accountType;
SBAccount(double amount, String accountType) {
this.amount = amount;  this.accountType =
accountType;
}
@Override
double calculateInterest() {
interestRate = accountType.equalsIgnoreCase("NRI") ? 6.0 : 4.0;  return
amount * interestRate / 100;
}
```

4.Output:

```
Select the option:
1. Interest Calculator  SB
2. Interest Calculator  FD
3. Interest Calculator  RD
4. Exit
1
Enter the Average amount in your account:
50000
Enter account type (Normal/NRI):
normal
Interest gained: Rs. 2000.0
Select the option:
1. Interest Calculator  SB
2. Interest Calculator  FD
3. Interest Calculator  RD
4. Exit
```

5. Learning outcomes:

1. Understand the concept of abstract classes and method overriding in Java.
2. Learn to implement real-world scenarios using object-oriented principles.
3. Develop skills to validate user input for different account types.
4. Gain knowledge of calculating interest dynamically based on conditions.
5. Enhance problem-solving abilities by applying conditional logic effectively**.**
